Casino AI Intelligent Digital Table System

Improve efficiency | Reduce costs |

Prevent fraud | Accurate revenue sharing

RFID Smart Casino System:

Chip Tracking, Risk Prevention, Accurate Payouts.

Casino AI Intelligent Digital Table System introduce

The System is a digital operations solution for casinos and premium entertainment venues.

Using RFID technology to track chips in real time, automated accounting, smart settlement, risk control, and intelligent operations management.

- Faster table settlement, reduced downtime, and higher table turnover;
- Cuts around 30% of monitoring and accounting manpower;
- Real-time detection of chip theft, chip switching, and counterfeit chips;
- Ensures accurate chip transactions and payouts with fewer human errors;
- Smart settlement management with clear agent commission tracking and transparent accounts;
- Real-time access to casino operation data for management;
- Lower labor costs and simplified operations management.

Casino AI Intelligent Digital Table System introduce

Traditional Operation Challenges

1 Inefficient Manual Accounting

Missed orders, calculation errors, and slow pay-outs during peak hours.

2 Settlement & Chip Disputes

Complex commissions and no real-time records make disputes hard to trace.

3 Lack of Real-Time Control

Unclear chip flow and disconnected data reduce operational visibility.

System advantages

1

Efficient Automation

Automated accounting and chip tracking reduce manual work and simplify operations.

2

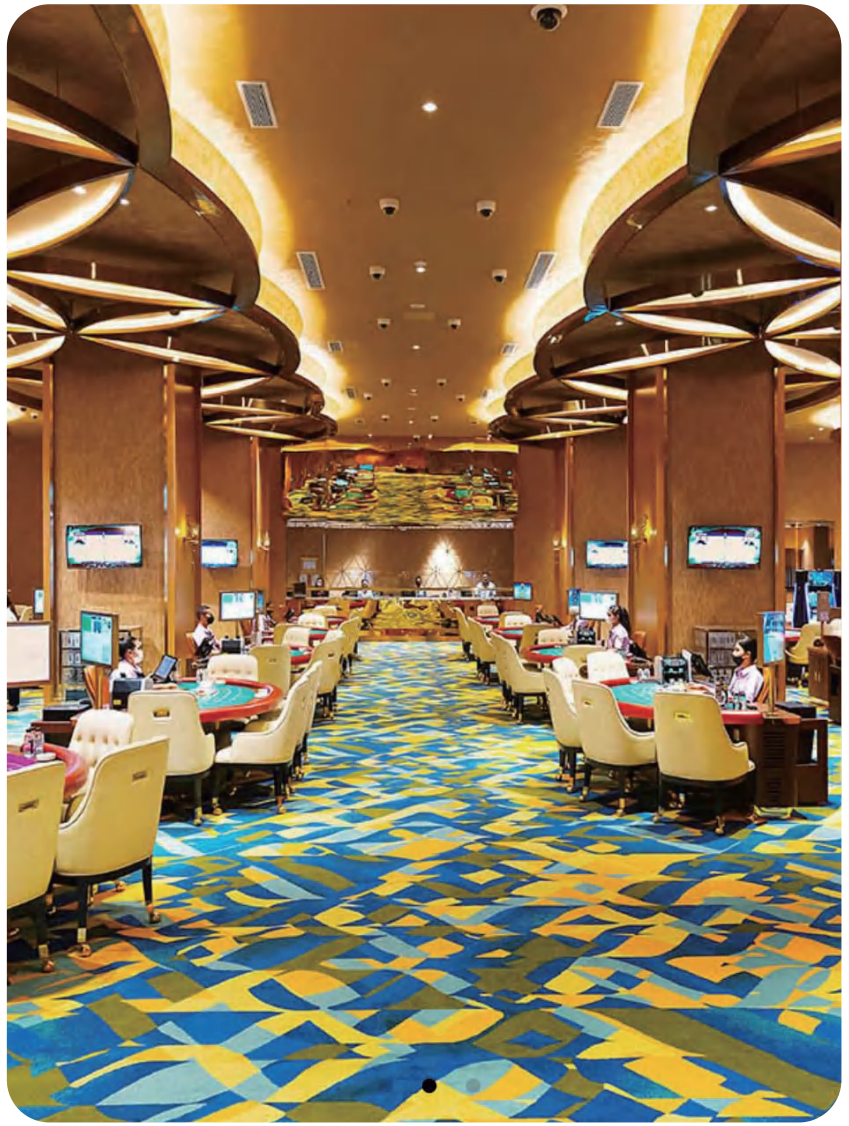

Accurate & Transparent Settlement

Supports multi-agent commissions with automatic settlement and anti-chip-switching control.

3

Complete Security Control

Real-time alerts, anti-cheating protection, and unified management across all operations.

The System —— The boss's real-time data center

Monitor casino operations in real time, anytime and anywhere.

Viewable in real time:

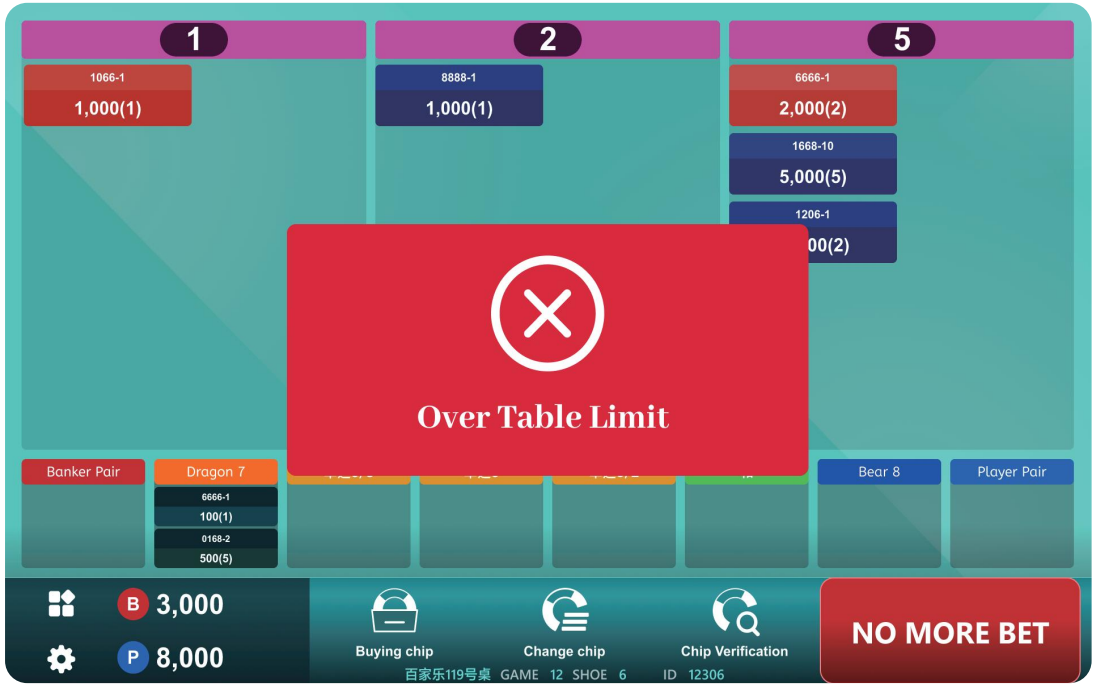

- Live Table Win/Loss
- Player Betting Trends
- Table Profit Rankings
- Dealer Status
- Fund Flow
- Live Inventory
- Settlement Data
- Risk Alerts
- Abnormal Operation Records

Smart Table

- **All-in-One, Easy Deployment**
  Hardware + software integrated, same workflow, fast setup with no training needed.
- **Seamless Integration**
  Fully compatible with existing RFID systems without changing table design or brand identity.
- **Advanced RFID Security**
  13.56 MHz RFID chips ensure accurate tracking, anti-counterfeit protection, and fair play.
- **High-frequency readers and antennas for stable, reliable table and cashier monitoring.**

Dealer —— Over Table Limit Alert

Chips over the limit

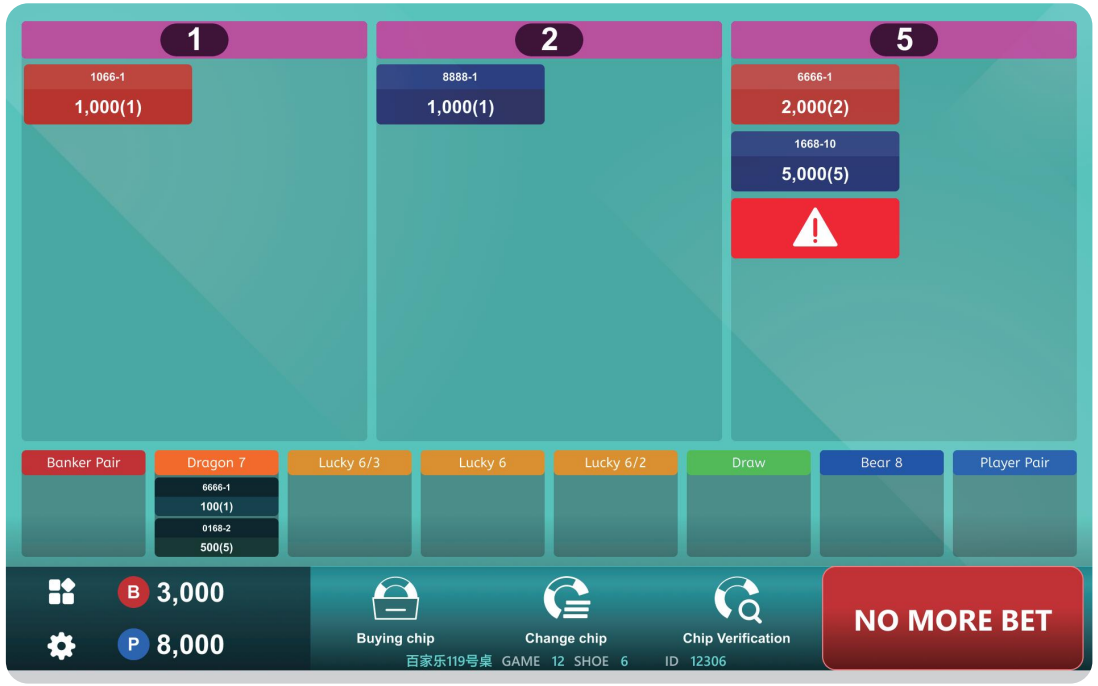

Auto alerts and betting restriction when chips exceed table limit to prevent risk exposure.

Chips below the limit

Alerts and betting control when chips fall below limit, ensuring fairness and smooth gameplay.

Dealer —— Preventing fake chip & Preventing Stealing chip

Illegal betting

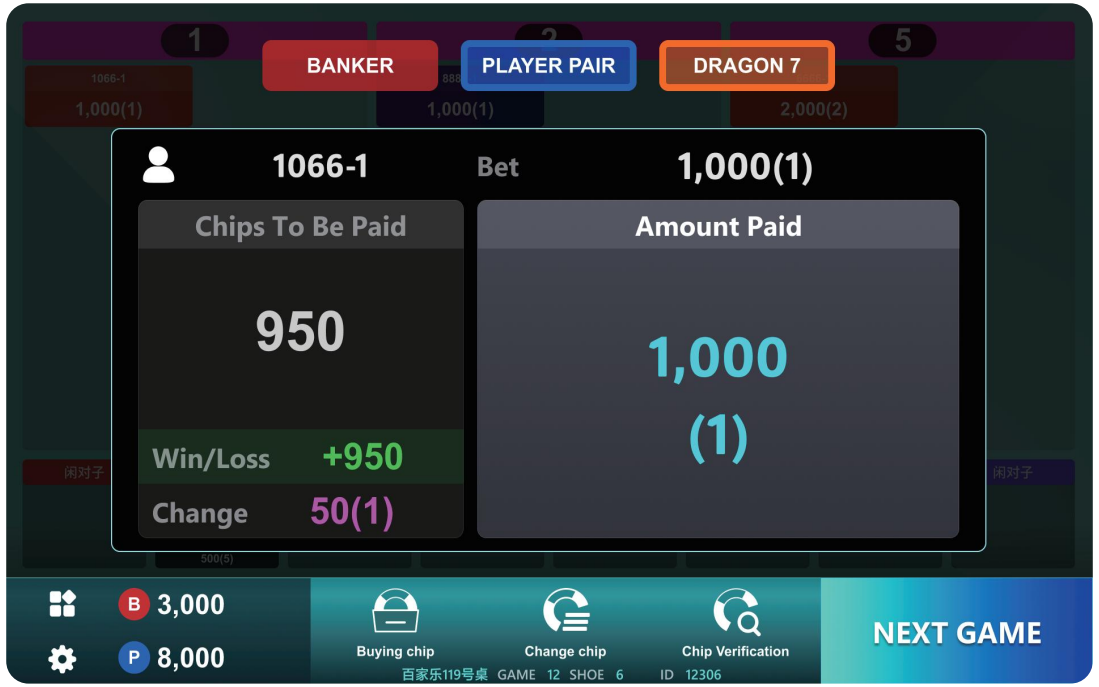

The system detects non-users or forged chips and automatically intercepts and alerts to ensure fair play.

Abnormal chip operation

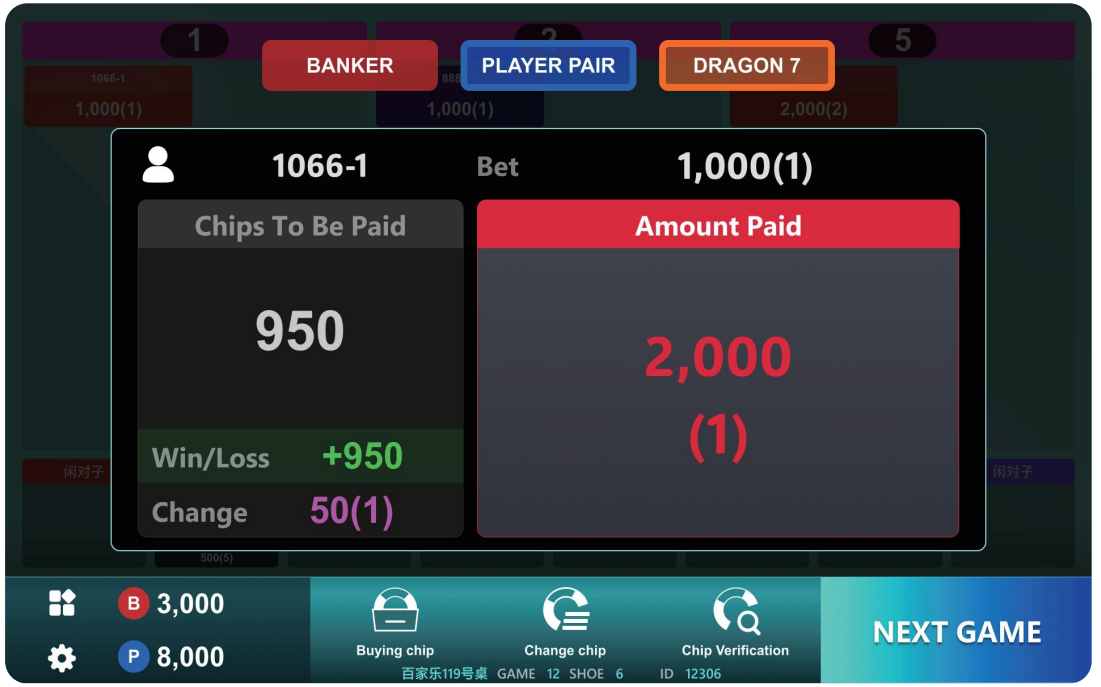

The system detects and alerts abnormal chip movement after stopping betting to prevent cheating and ensure fairness.

Dealer —— Accurate Payouts

Normal Payout

The system automatically calculates payouts, reducing table downtime and minimizing manual errors.

Overpayment Alert

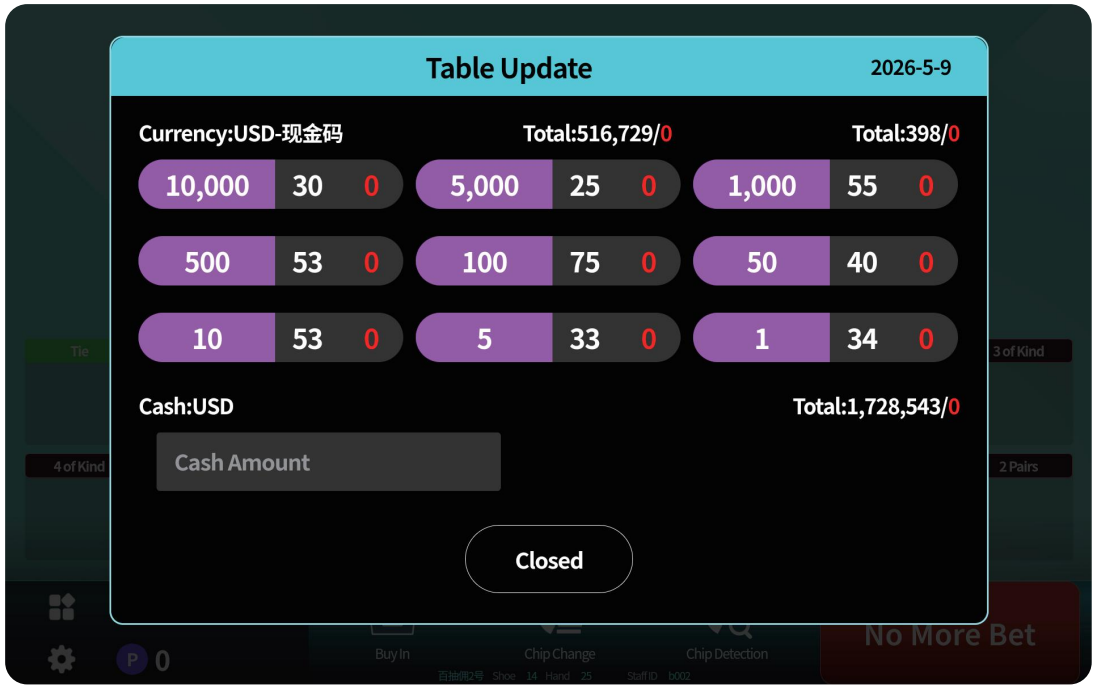

If the payout exceeds the correct amount, the system continuously alerts until the correct payout is made, preventing financial loss.

Dealer —— Preventing Cheating & Preventing theft chip

Automatic Game Result Recognition

The system automatically recognizes game results with AI-powered outcome detection, no manual input required.

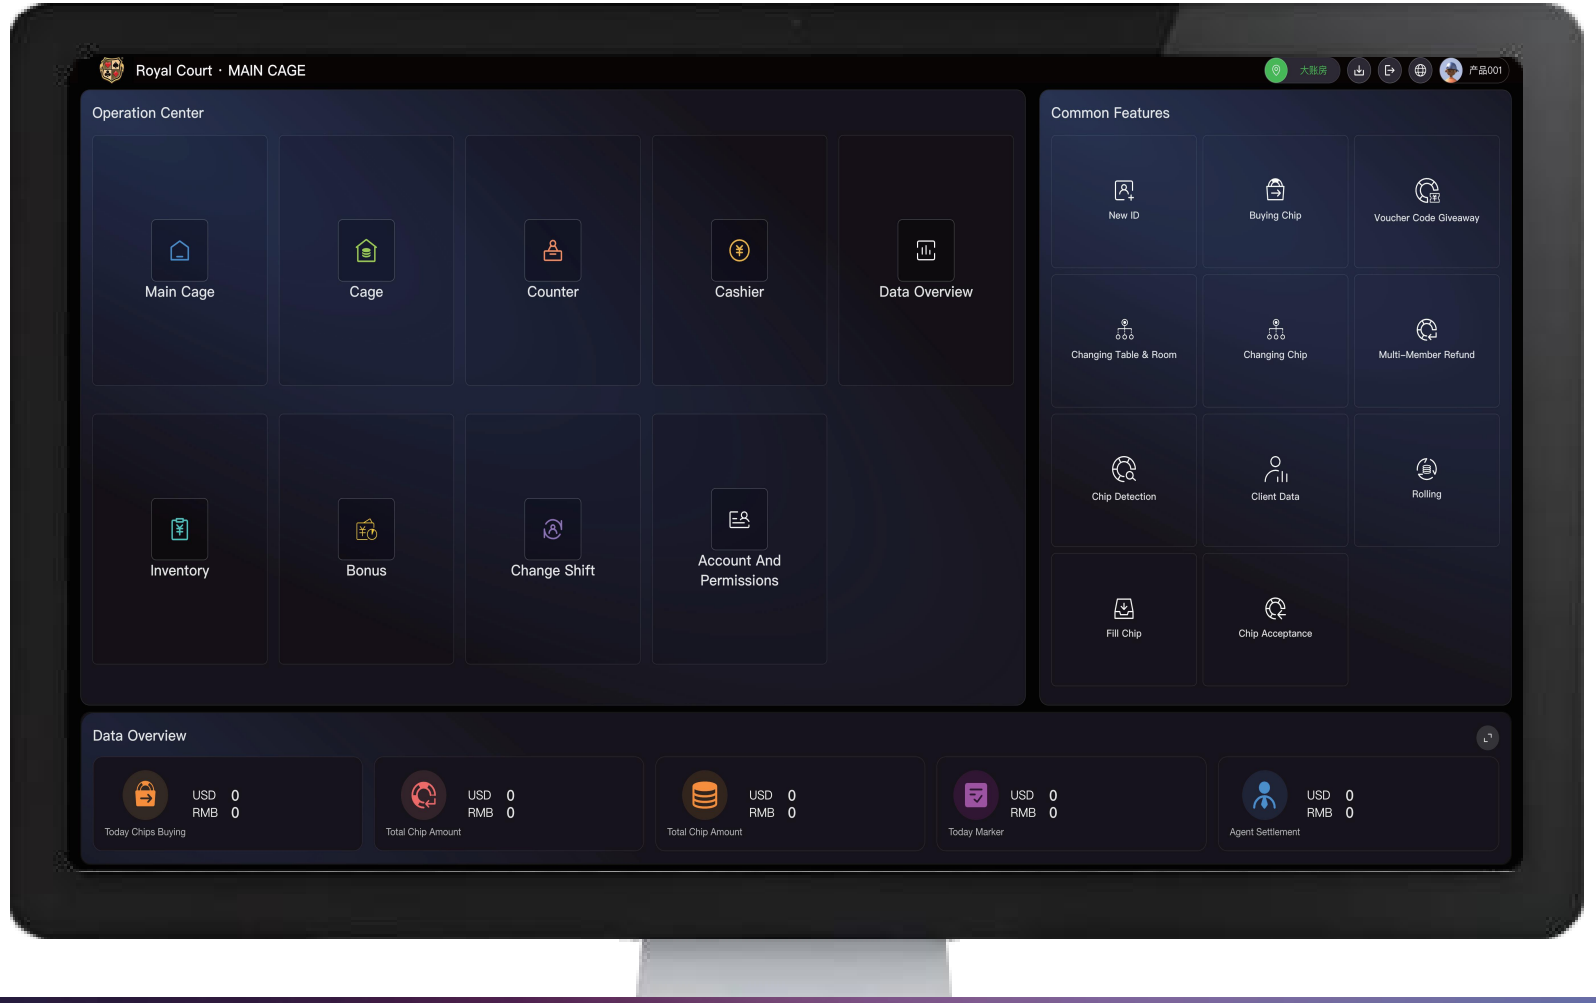

Automatic Chip Tray Counting

The system automatically calculates the expected chip quantity and denominations on the chip plate.

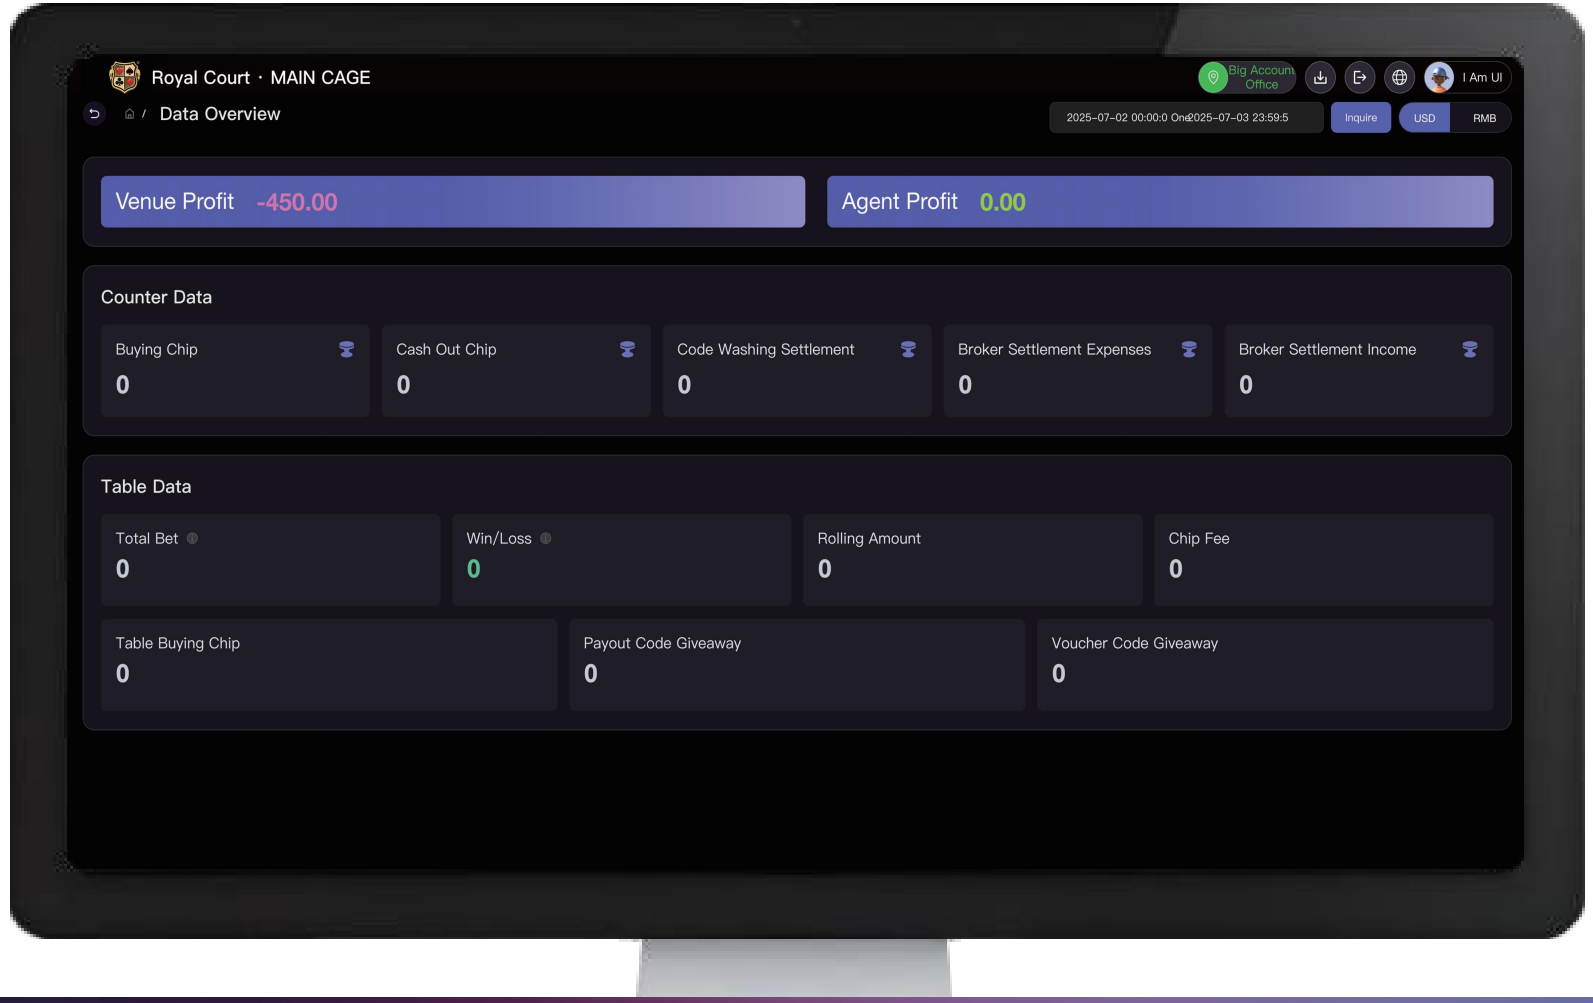

Flexible Access & Efficient Operations

Role-based permissions improve security and operational efficiency.

Full Control of Operational Data

View current operational data in real time, track transactions and fund flows, and ensure transparency of over-the-counter funds.
